

ADDENDUM TO FACT SHEET
Permit No. WA-003105-4
Foss Maritime Company

This is an addendum to the fact sheet accompanying NPDES Permit No. WA-003105-4, which was issued to Foss Maritime Company on September 1, 2005. The following revision is made as the result of a recent change at the facility.

MODIFICATION FOR THE PERMIT

Drydocks No. 3 and 4 have been added in Special Conditions S1.B and S2 on pages 5 and 6 of the permit.

The facility purchased two used drydocks DD3 and DD4, and began to operate them at Foss Shipyard effective March 15, 2006.

In addition, a paragraph pertaining to submitting discharge monitoring reports when the facility is not discharging was added to S3.A, which reads as follows:

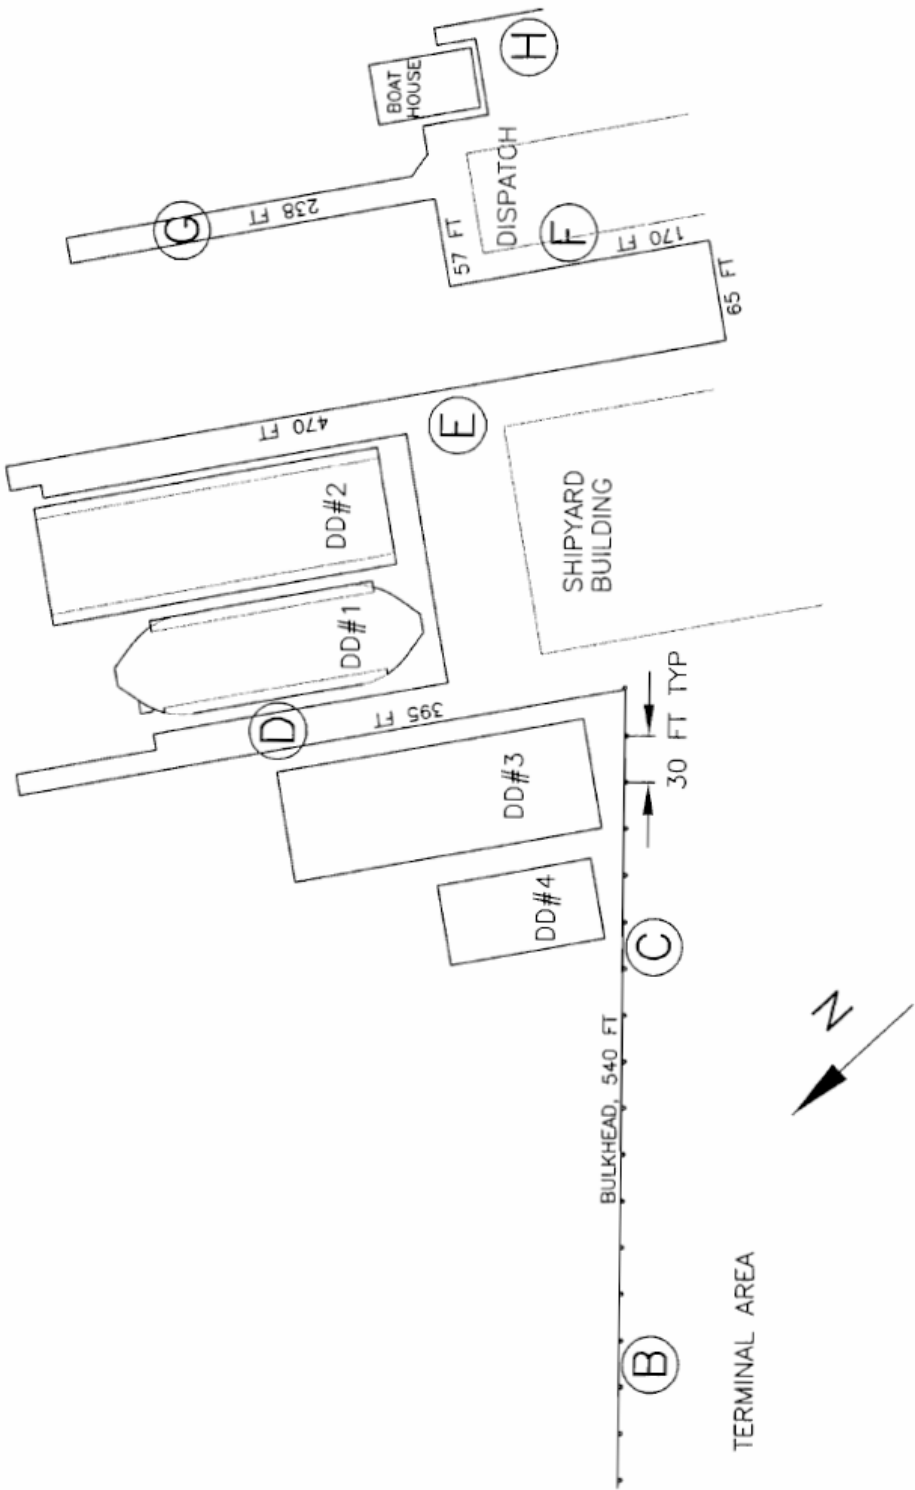

“Discharge Monitoring Report forms must be submitted quarterly whether or not the facility was discharging. If there was no discharge or the facility was not operating during a given monitoring period, the Permittee is required to submit the form as required with the words “no discharge” entered in place of the monitoring results.”

PUBLIC NOTICES

The changes to this permit are considered to constitute a major modification under 40 CFR 122.62. Consequently the draft permit modification is required to be public-noticed for a 30-day public review and comment period. This public notice of modification will be published in the *Seattle Times*. The final modification is contingent upon the outcome of the public review and comment period.

See attached site map (4 dry docks).
